# Class Exercise #2

Week 2

# Customer Tally

- Stan Lee, the owner of *The Super Secret Comic Book Emporium* is looking to track the number of customers that visit his shop during the day. He is open from **12:00 – 4:00** each day and is using a piece of paper to keep track of his patrons. The paper is divided into 4 columns that represent each hour and he will place a tick mark in the appropriate column when a customer enters the store. At the end of the day he adds the people and enters them into a computer. He would like to have a program that will **display the number of customers that came in each hour**. He would also like to know how may **total customers** came into the store and the **average number of customers per hour**.
